How to read your account statement

Your account statement provides a summary of your opening and closing balance, along with your recent Afterpay activity—such as orders, refunds, and payments—during the statement period. Only activity that is financed by the credit we provide will be reflected in your opening and closing balance.

1. Activity that does impact your opening and closing balance

With the exception of the activities listed in section 2 below, the following activities affect your opening and closing balance:

- Order value and the associated instalment payments
- Refunds to your Afterpay account
- Debt waivers

2. Activity that does not impact your opening and closing balance

The following activities are not financed by the credit we provide and do not affect your opening and closing balance:

- Order value that forms the first instalment payment, when paid at the time of the order
- Refunds made directly to your linked card or bank account
- Late fees (paid or refunded)

Please note

- Afterpay Plus subscription fees are not included in your account statement.
- If a manual payment is made to Afterpay by you or on your behalf, the date shown on your account statement will be the date we match it to your Afterpay account—not the date the payment was originally made.

Questions about your account statement?

- You should check your account statement as soon as you receive it and report any suspected unauthorised transactions or errors.
- If you have other questions or concerns, you can find answers in the Help section of the app or by visiting our Help Centre.
